## Technical Information on Grade RE95

Grade RE92, which has been well known for many years, was further enhanced through development at SGL Carbon Group's Ringsdorff plant. The resulting product has the designation RE95.

The following benefits arise with regard to all applications known to us:

- Improvement in commutation capability for DC machines
- Decrease in commutator temperature, both in rated duty and in overload operation
- Improvement of behaviour at overload and regeneration including high current impulses
- Even and lower specific brush wear rate
- Reduced occurrence of copper drag

Resin- and oil-impregnated types N1, N2, N6 and N7 are of course available also for grade RE95.

Our RE92 products are at your disposal in sufficient quantity until production is finally changed over to grade RE95.

We would be pleased to facilitate your smooth transition to grade RE95.
